- Testing to identify bugs and technical issues before and after deploying progress.

- Contributing in building and maintaining internal as well as customer facing Frontend applications.

- Proficiency with **PWA** (Progressive Web Applications).

SOFT SKILLS

Critical Thinking. Critical thinking is the intellectually disciplined process of actively and skillfully conceptualizing, applying, analyzing, synthesizing, and/or evaluating information gathered from, or generated by, observation, experience, reflection, reasoning, or communication, as a guide to belief and action.

Communication. Effective communication involves conveying your message clearly, concisely and accurately. Waffling wastes time and dilutes your message – less is more! If you are prone to being long-winded, take the time to think about what you are going to say in advance rather than trying to stumble through a conversation.

Self-learning. Self-learning is the method of gathering, processing, and retaining knowledge without the help of another person. Any knowledge you get outside of a formal educational setting, such as through self-study or experience, is self-driven learning.
